

## **OP-02 “Keeping the Lights On”**

**Mr. Walt Patterson**

(Senior Research Fellow, Royal Institute of International Affairs, U.K.)

### Abstract

As liberalization and technical innovation interact, the clash between traditional and innovative electricity grows ever more intense. Can we find a way to retain the best features of traditional electricity, while realizing the potential of innovative? Can we bring the benefits of electricity to two billion people still without? Can we agree what we mean by sustainable electricity? And can we get there from here, worldwide, while keeping the lights on?
