

S1-08 “Opportunities & Challenges in 21st Century Power Engineering”

Mr. Mark Lauby

(EPRI, Treasurer of IERE, U.S.A.)

Abstract

This presentation will focus on the long term horizon, the impacts of Distributed Resources and the subsequent needs/demands on the Power Systems of the future. The power system has been declared the engineering achievement of the 20th century. However, unless new investments are made to accommodate the generation patterns of the future, it could easily become the relic of the 21st.
