

Development of countermeasure technology against biodiversity conservation regulations related to the electric power industry

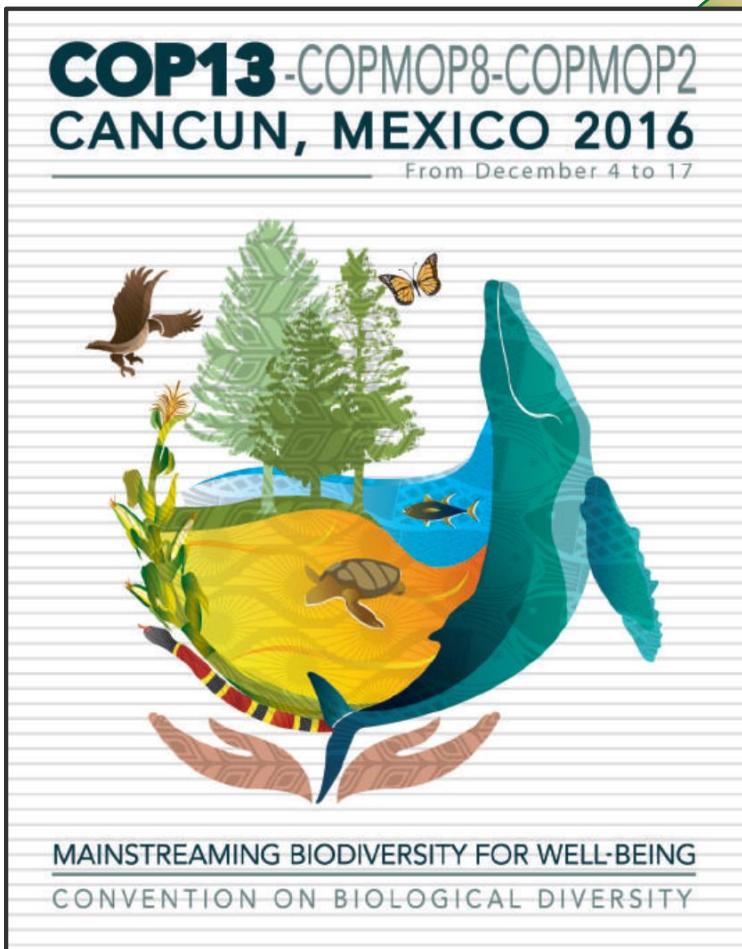

SONOKO TSUDA
Energy Applications R&D Center

01

Background: Environmental conservation actions are accelerating toward 2020

01-1 COP ; The conference of the parties to the convention on biological diversity

01-2 Aichi Biodiversity Targets ; the world aim adopted in COP10

Five Strategic Goals & Twenty Targets required to be achieved by 2020

SG A

Address the underlying causes of biodiversity loss by mainstreaming biodiversity across government and society

1 Awareness increased

2 Biodiversity values integrated

3 Incentives reformed

4 Sustainable consumption and production

SG B

Reduce the direct pressures on biodiversity and promote sustainable use

5 Habitat loss halved or reduced

6 Sustainable management of marine living resources

7 Sustainable agriculture, aquaculture and forestry

8 Pollution reduced

9 Invasive alien species prevented and controlled

10 Pressures on vulnerable ecosystems reduced

SG C

To improve the status of biodiversity by safeguarding ecosystems, species and genetic diversity

11 Protected areas increased and improved

12 Extinction prevented

13 Genetic diversity maintained

SG D

Enhance the benefits to all from biodiversity and ecosystem services

14 Ecosystems and essential services safeguarded

15 Ecosystems restored and resilience enhanced

16 Nagoya protocol in force and operational

SG E

Enhance implementation through participatory planning, knowledge and capacity building

17 NBSAPs adopted as policy instrument

18 Traditional knowledge respected

19 Knowledge improved, shared and applied

20 Financial resources from all sources increased

Some of these affect
the power company's
field operation.

02

CASE 1 :

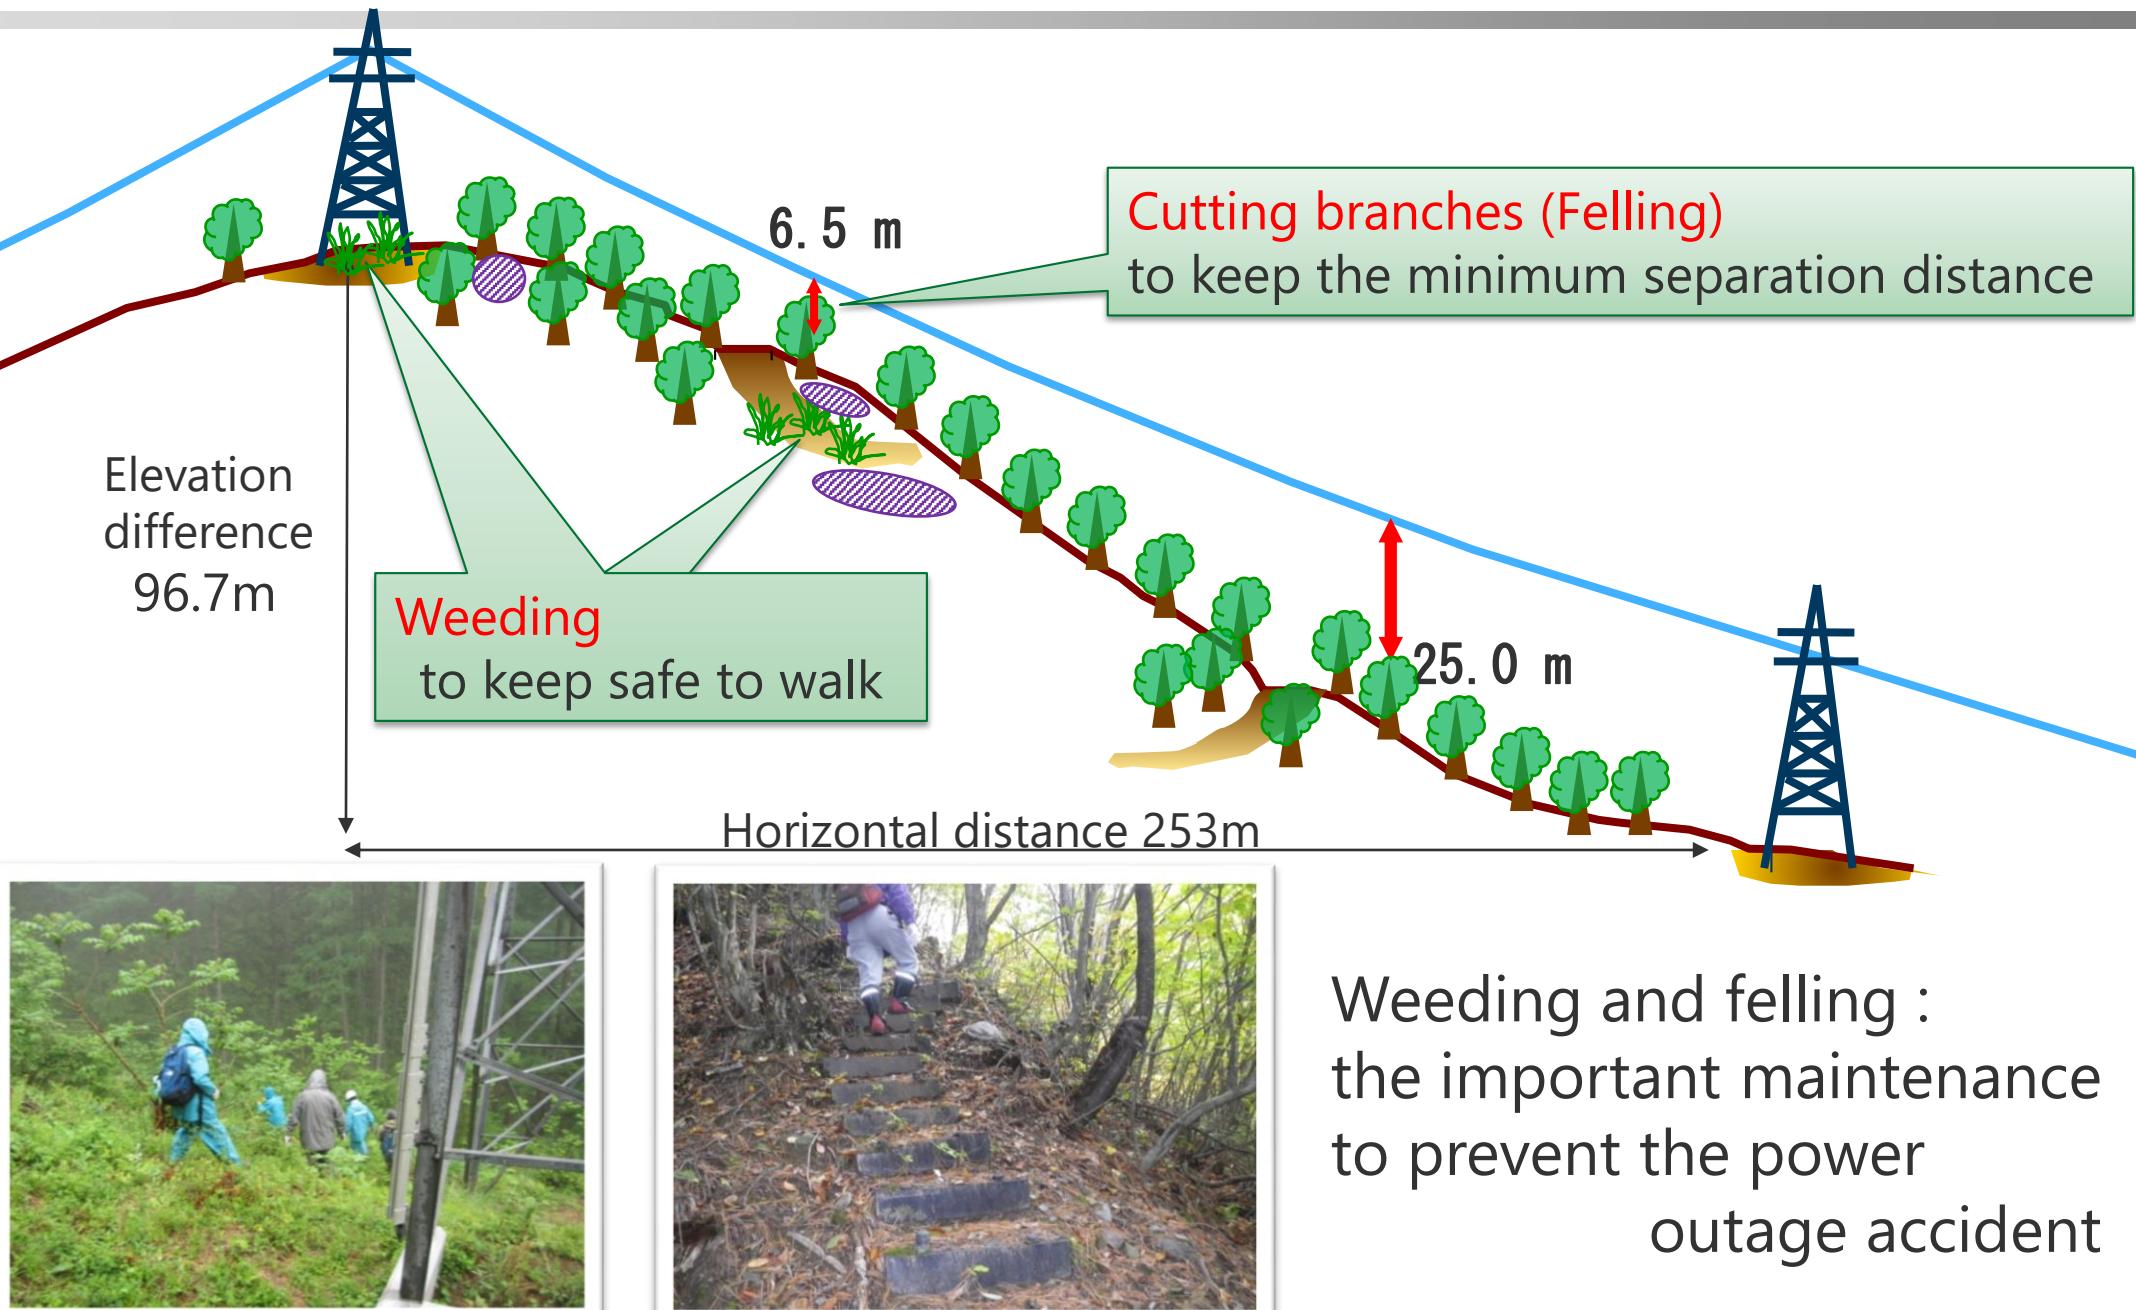

Countermeasure to regulations for endangered species protection

By 2020 the extinction of known threatened species has been prevented and their conservation status, particularly of those most in decline, has been improved and sustained.

Quotation from Aichi Biodiversity Targets – Fliers, CBD

02-1 That was detected on the patrol path

Site of tower

On the path way

Weeding and felling :
the important maintenance
to prevent the power
outage accident

02-2

To protect this flower, discontinuance of weeding was required

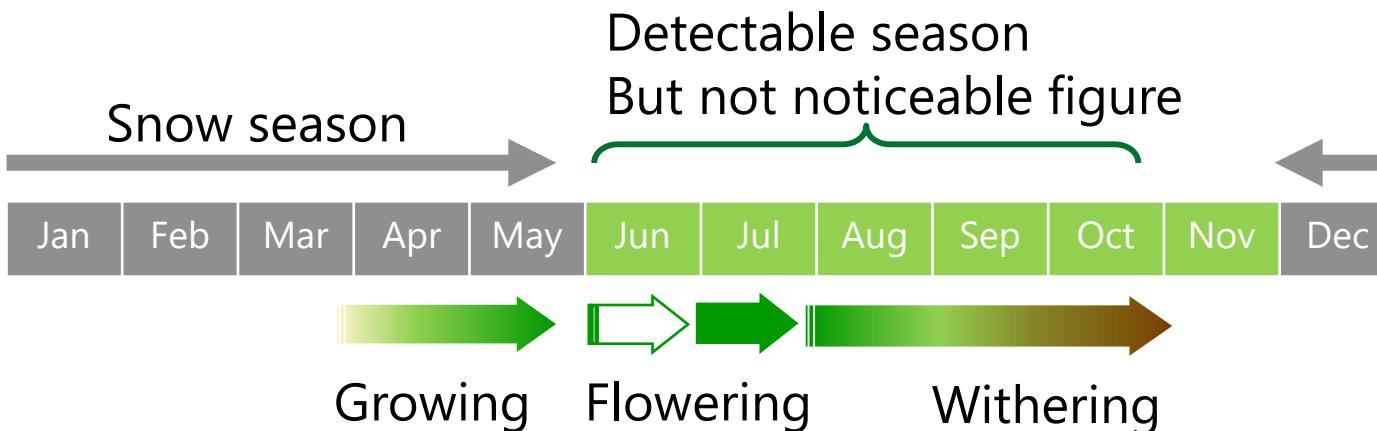

"Tadesumire" (*Viola Thibaudieri*)

Opened flower
(White but small)

Closed flower
(Green on green leaf)

Height : 20~40cm

Listed on
**"the ordinance of
designated rare wild
animals and plants"**
of Nagano Pref.

02-3 Researches and experiments to establish an artificial propagation

Researching their habitat

Collecting seeds

Artificial seeding

Get to bloom under the
artificial cultivated condition

Making clear their growing
conditions

Making clear their germinating
conditions

02-4 Transplant around the site and following monitoring

With Nagano pref.'s institute
and the environmental conservation group

- We had worked on this study for four years.
- We had achieved a better relationship.

- Artificial propagation was succeeded.
- The way of weeding not disturbing their habitat or growth was revealed.
- Weeding was permitted continuously.

中部電力株式会社 長野支店

執行役員 長野支店長 稲垣 透 様

謹啓

早春の候 資職及び貴支店の皆様におかれましては益々御清祥のこととお慶び申し上げます。

この度、貴支店の皆様が中心となってお取り組み頂きましたタデスマレの保護回復事業の活動結果報告書を頂戴いたしました。

平成二十年から五年間にわたる皆様方の熱意あふれる、又専門性の高いお取組により、タデスマレの生息実態の把握、自生地の保全、増殖技術の確立など多大な成果を挙げられ、本種の保護回復に向けた道筋を明瞭にお示しいただきましたこと、衷心より御礼申し上げる次第です。

ご承知のとおり、タデスマレは日本では本県のみに生育する極めて希少な種であり、本県の豊かな自然を象徴する存在であります。

県といたしましても、皆様からお示し頂いた増殖技術等を県の環境保全研究所や関係機関において有効に活用させて頂き、域外保全をはじめとする保護回復の取組を鋭意進めてまいる所存であります。

皆様方には、自生地の保全などタデスマレの保護回復に、引き続きご支援、ご協力を賜りますようお願い申し上げます。

末筆ながら、貴職及び関係各位のご健勝と益々のご活躍を祈念申し上げ、甚だ簡単ながら、御礼とさせていただきます。

敬白

長野県知事
阿部 守一

The appreciation letter
from Nagano governor

02-5 Endangered Plants established the conservation technology in our institute

CHUBU
Electric Power

Viola Thibaudieri / violet

Yoania flava / orchid

Bletilla striata / orchid

Aconitum kiyomiense / aconite

Magnolia tomentosa / magnolia

03

CASE 2 : Countermeasure to new regulations for invasive species prevention and domestic biodiversity protection

By 2020, invasive alien species and pathways are identified and prioritized, priority species are controlled or eradicated, and measures are in place to manage pathways to prevent their introduction and establishment.

Quotation from Aichi Biodiversity Targets – Fliers, CBD

By 2020, the genetic diversity of cultivated plants and farmed and domesticated animals and of wild relatives, including other socio-economically as well as culturally valuable species, is maintained, and strategies have been developed and implemented for minimizing genetic erosion and safeguarding their genetic diversity.

Quotation from Aichi Biodiversity Targets – Fliers, CBD

03-1 Type of plants used for greening construction has been restricted

“Guideline for slope greening in the national parks”

Oct. 2015, Ministry of the Environment

- ✓ Don't use alien grasses or herbaceous plants
- ✓ Use native plant species only
- ✓ Collect the seeds or seedlings

near the construction site

...with the view to protect the “national” or “regional” genetic diversity of plant species from imported invasive plants

03-2 What is the problem ?

Functionalities required by greening ;

To prevent scattering or collapsing of soil,
cover the ground speedy and stable

Courtesy of Japan Conservation Engineers & Co.,Ltd.

Conventionally,

Imported pastures have been used,
because

- ✓ Germinate stably
- ✓ Grow fast
- ✓ Low seed cost
- ✓ Large amount of distribution

- What kind of native species is appropriate for our construction site?
- Is there suitable collecting area to protect their genetic diversity?
- How long does it take to get adequate seed?

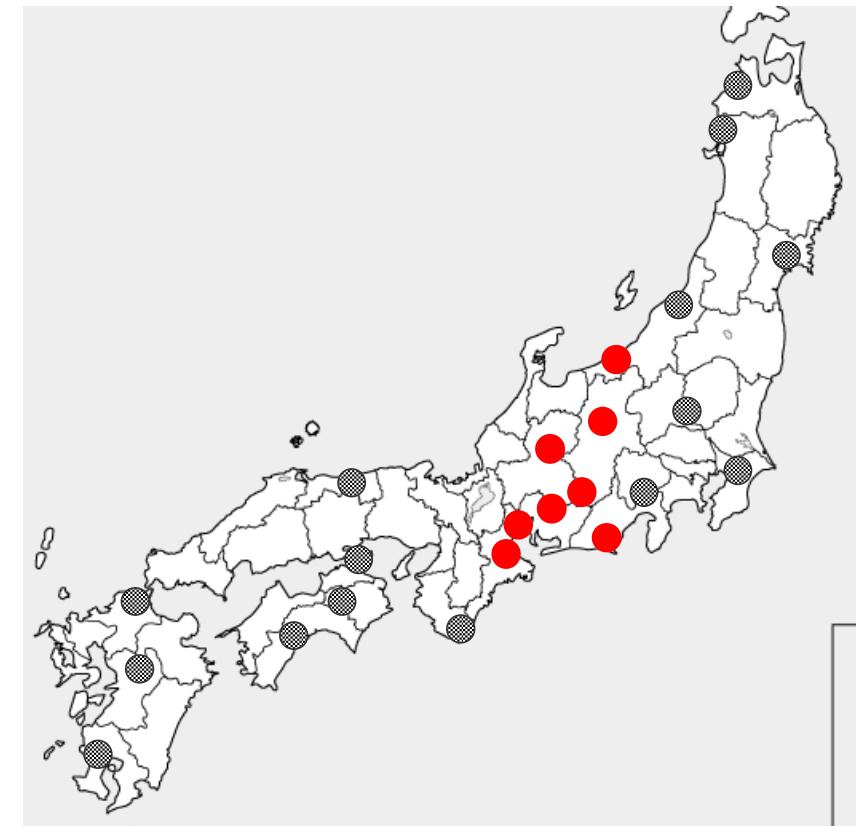

- !! Construction term "longer"
- !! Greening cost "higher"

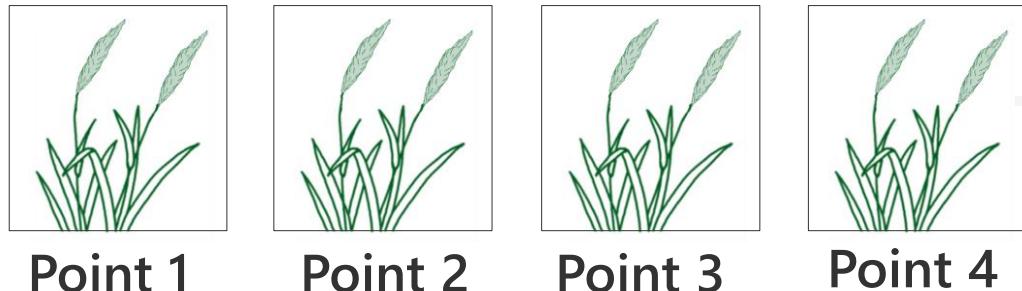

10 native herbaceous plants
self-sown in Chubu-region

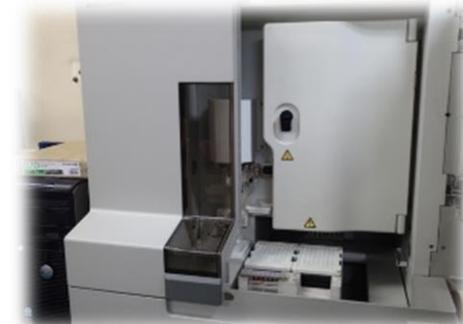

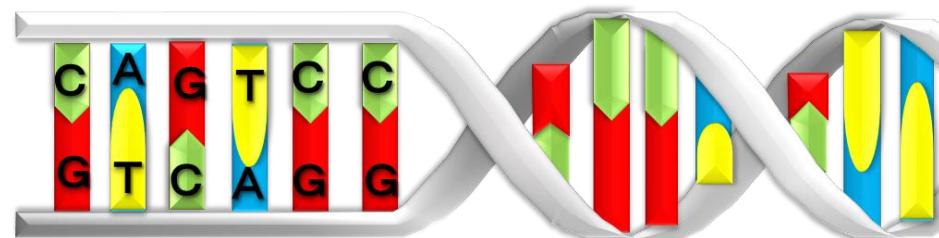

Collected samples
from 23 regions of Japan

03-4 The way of confirming the genetic differences

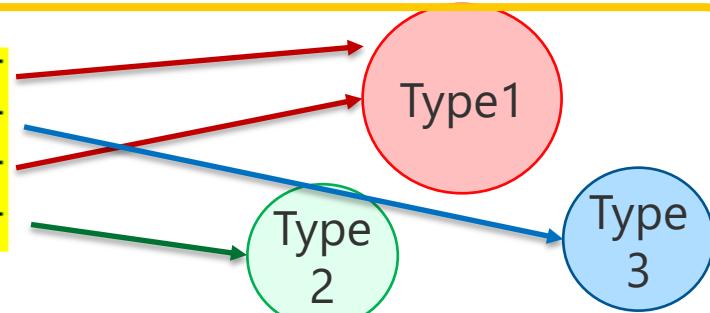

- Analyze same kind and same shape but different place

- Read bases of their DNA

Point 1 AATGCGGGCTTAATATAACCGTTAAAGTACGGT
Point 2 AAAAGGCCCAATTATAAAC
Point 3 AAATGCGGGCTTAATATAACCGTTAAAGTACGGT
Point 4 AAATGCGGGCTTAATATTACCGTTAAAGTACGGT

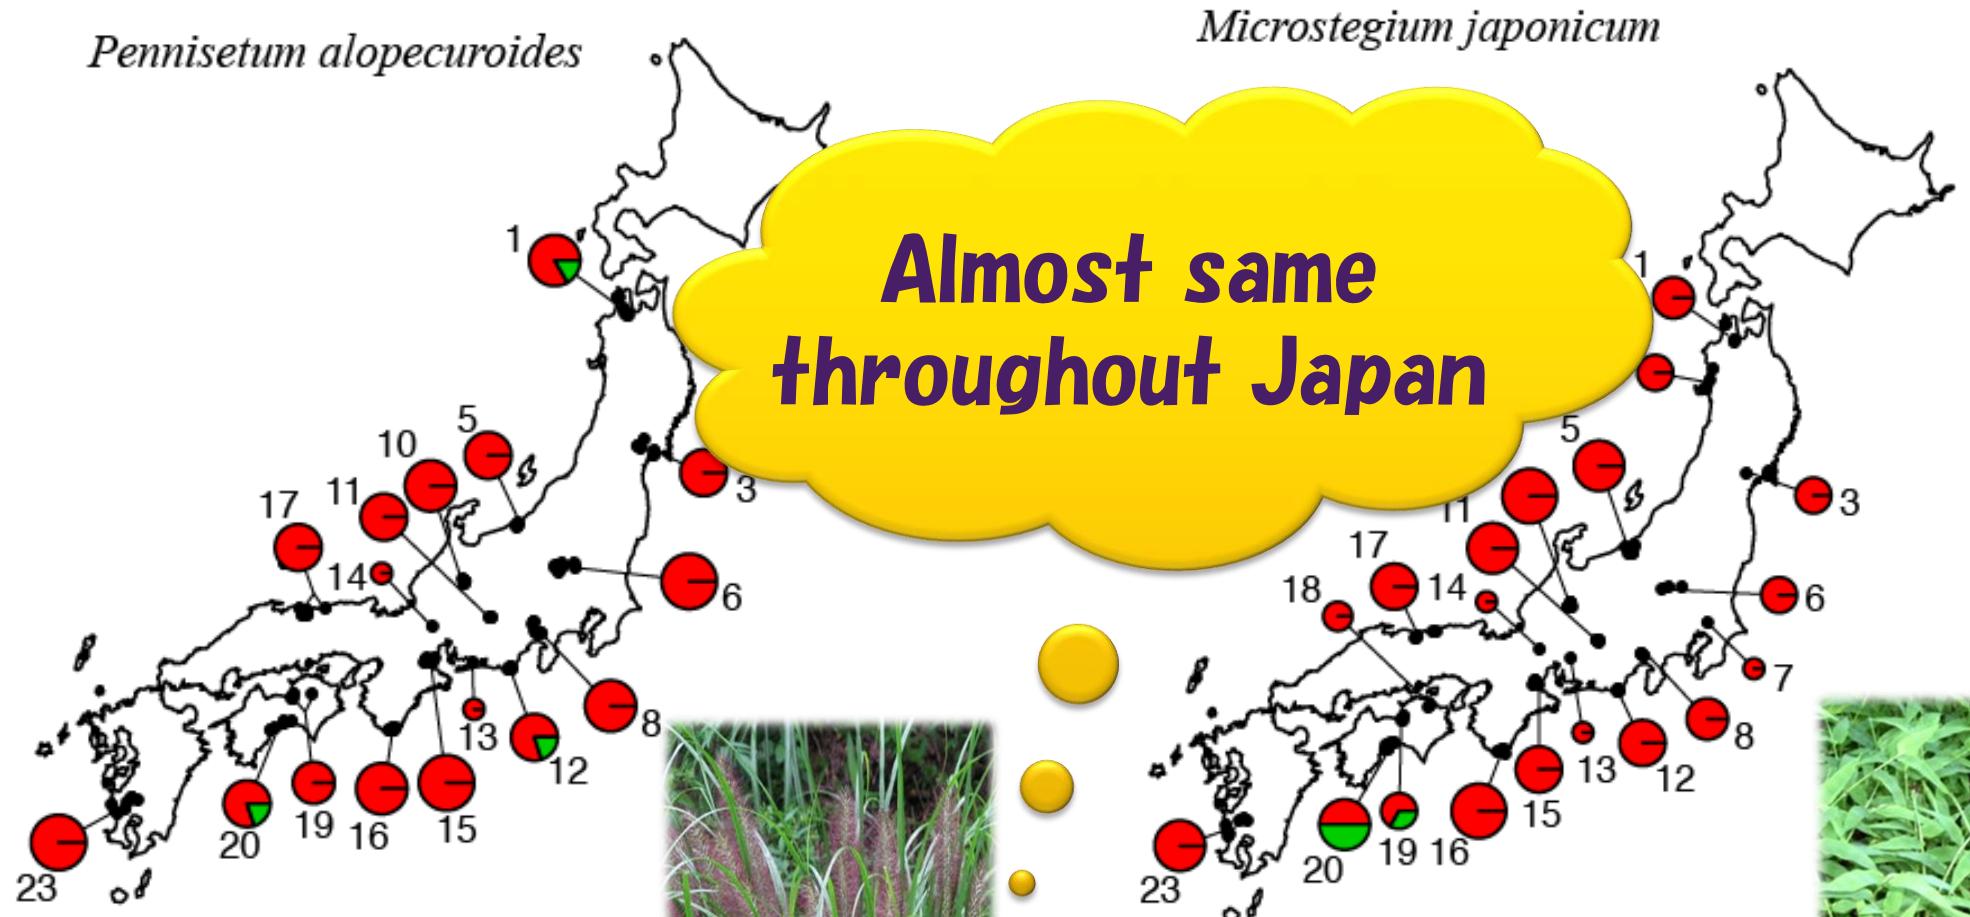

- Detect differences between them

- Grouping from similarity

03-5 Distribution of genetic type of native plant (1)

Pattern 1

It can not be confirmed genetic differences.

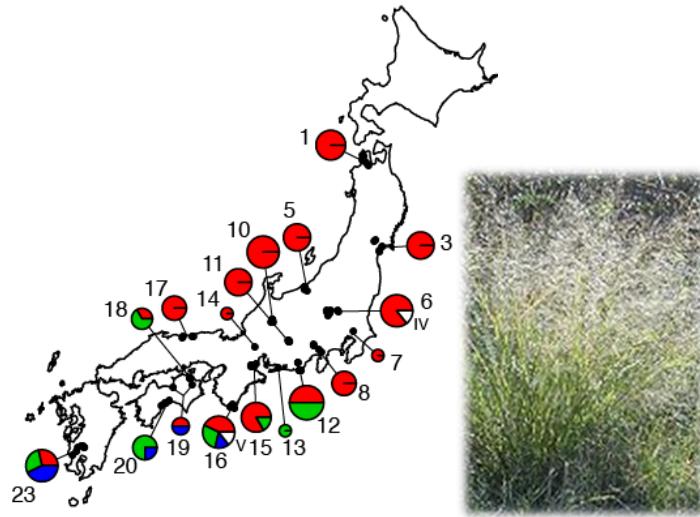

03-6 Distribution of genetic type of native plant (2)

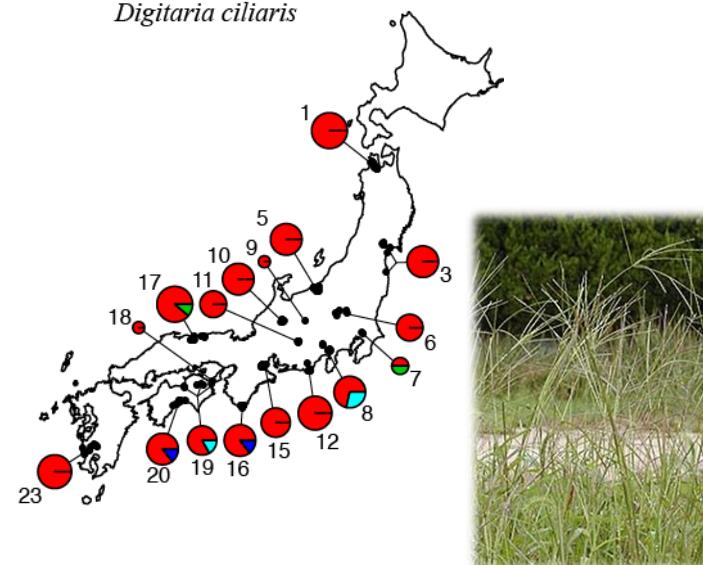

Pattern 2

Plural but not much genetic types are detected.

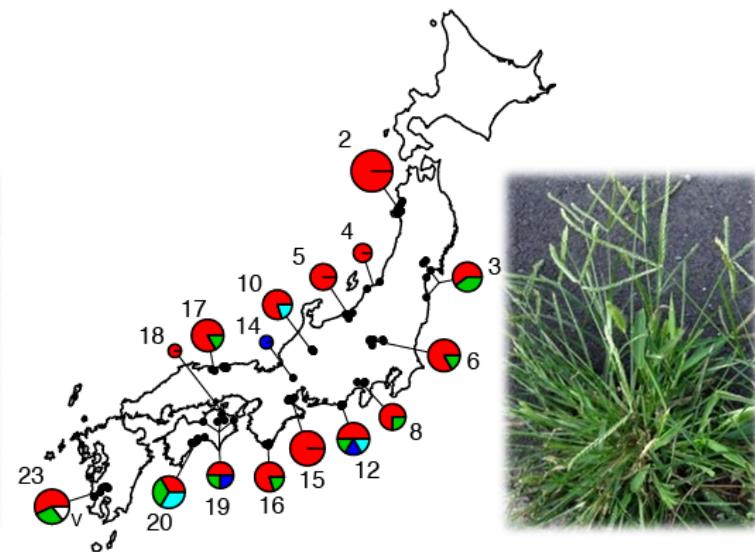

Eragrostis ferruginea

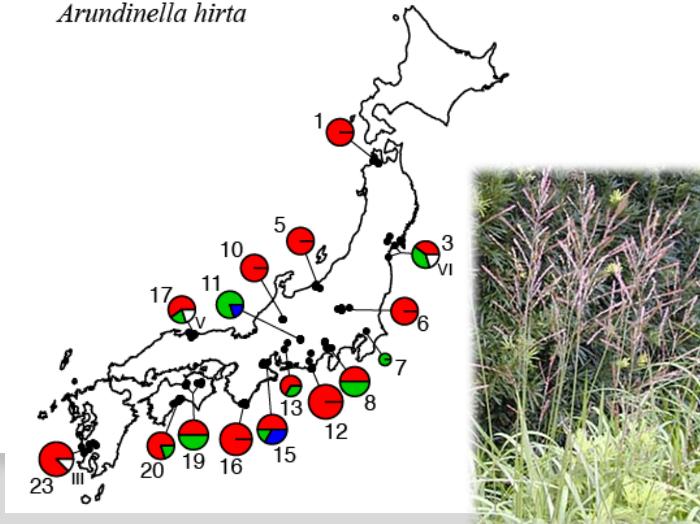

Digitaria ciliaris

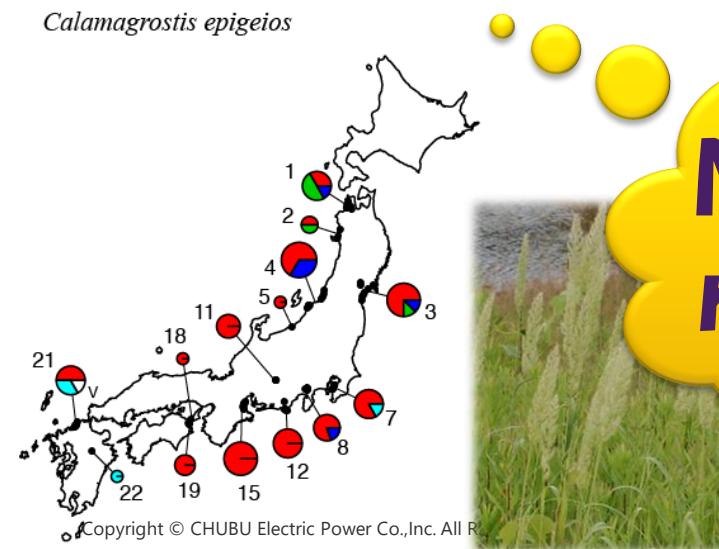

Eleusine indica

Arundinella hirta

Calamagrostis epigeios

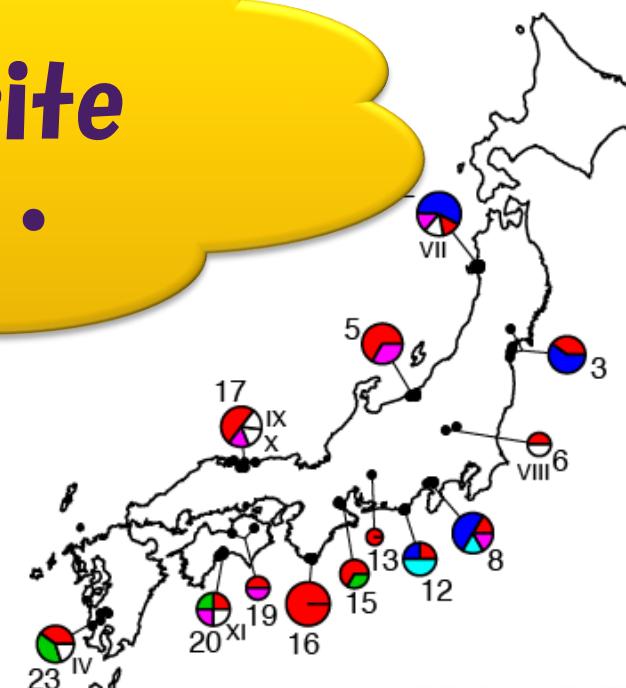

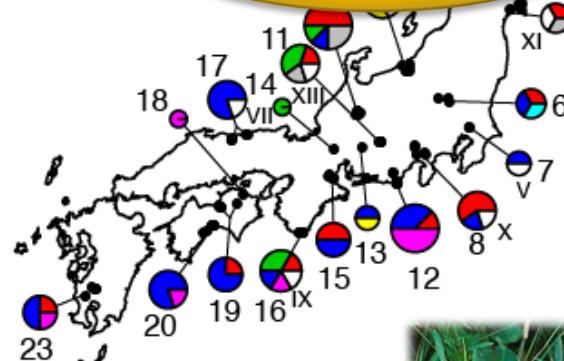

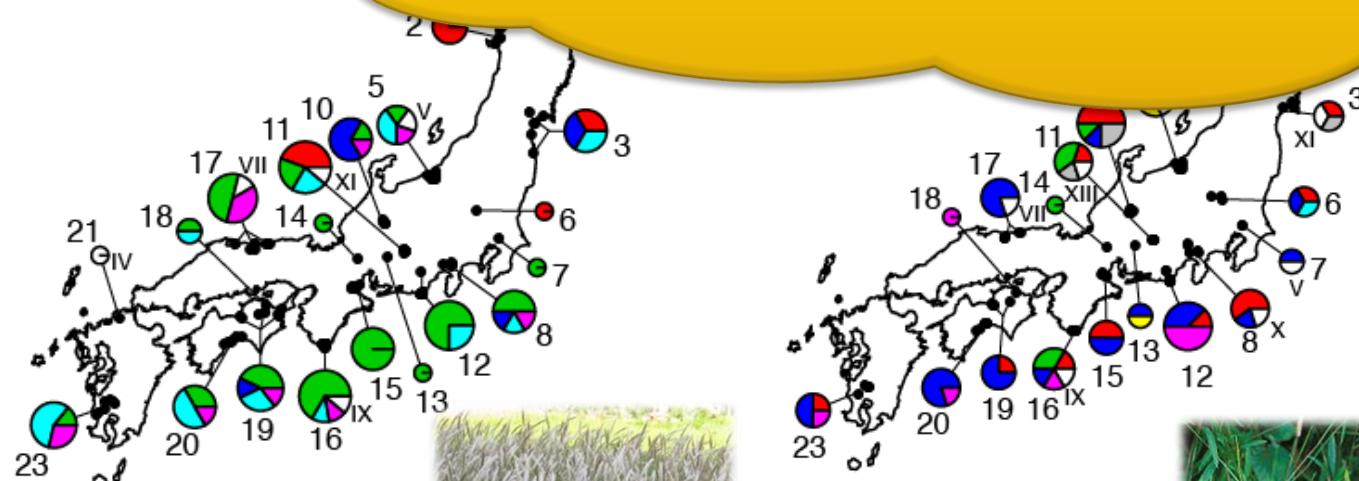

Not so many
regionality?

03-7 Distribution of genetic type of native plant (3)

Pattern 3

Various genetic types are detected.

Imperata cylindrica

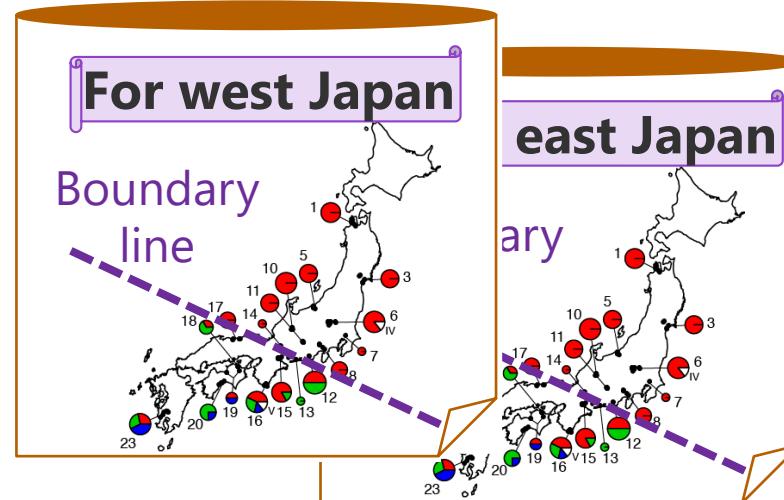

03-8 The expected results of this study

- Native seed or seedling could be produced commercially.

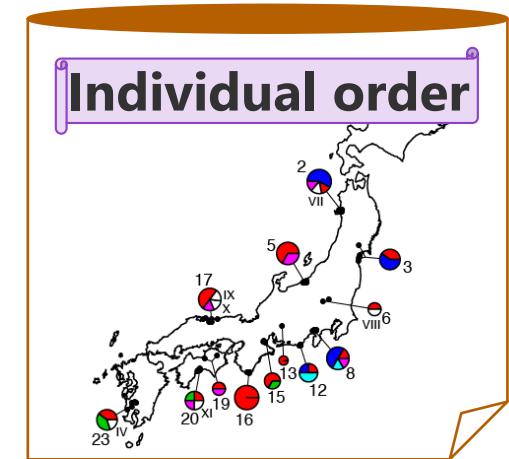

Pattern 1

Pattern 2

Pattern 3

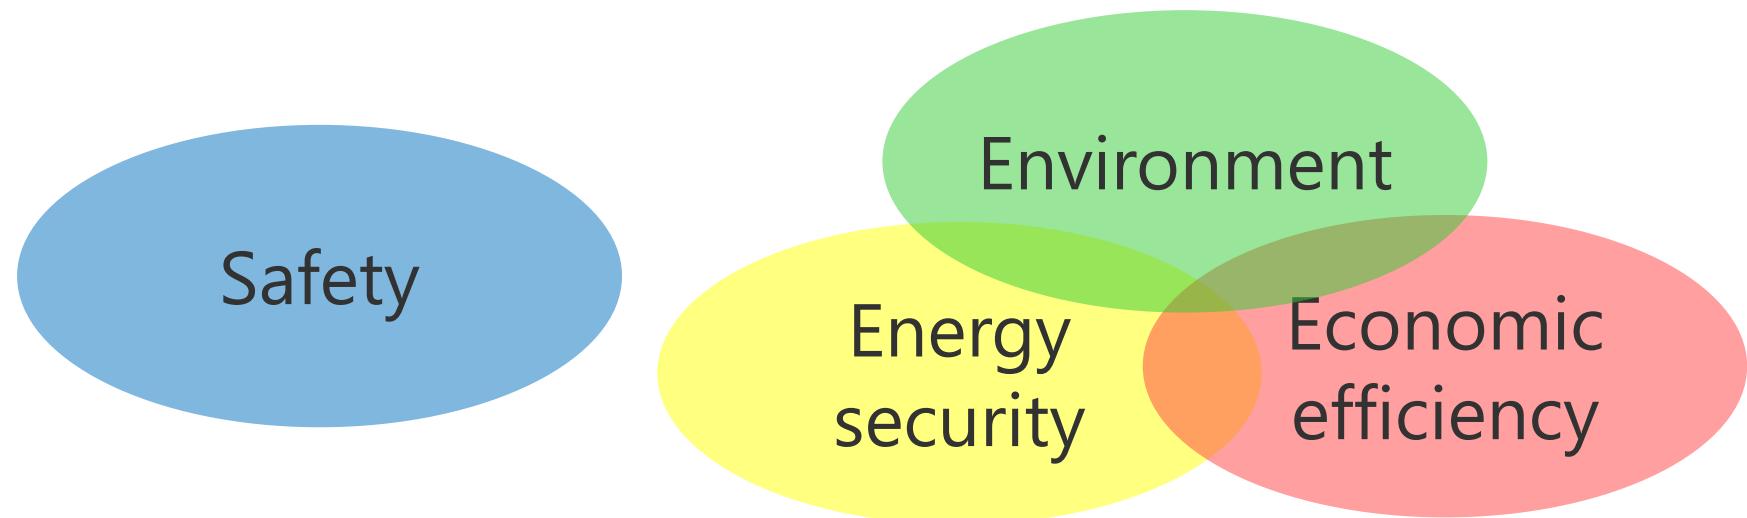

- Excessive cost and term for greening could be reduced reasonably.

- Business activities and biodiversity conservation could be compatible certainly.

Commitment to Environmental Conservation

The responsibility of Chubu Electric Power is
to achieve “S+3E” simultaneously

during the process of delivering energy
