Final Report of Technology Foresight 2023 Available

IERE has issued its final report, Technology Foresight 2023 (TF2023), a survey of emerging technologies that have the potential to impact the power industry in the 2030s significantly.

The survey first briefly examined 100 technologies and then narrowed them down to 20 technologies based on the feedback from IERE members and advice from the Technology Foresight Committee and provided more detailed information. They have the potential to be game changers, and the outlook of IERE member experts is also included.

The top 20 technologies are available in the final report, and the file cards for the 100 technologies selected in the preliminary stages are available in the interim report. (IERE members only).
